AYODEJI ADENIYI

TECHNICAL PRODUCT MANAGER · PRODUCT ENGINEER

Abuja, Nigeria · +234 803 649 6159 · dayjigud@gmail.com · ayodeji.xyz · linkedin.com/in/dayjigud

PROFILE

Product manager who ships working software. I take products from research and strategy through design, code and launch — seven live products across health tech, fintech, mobility and AI tooling, built for African markets with React, TypeScript, Supabase and LLM APIs. Currently building at Àrà, an AI-native product studio in Abuja. Three years of operations leadership at a consumer-lending firm ground my product work in commercial reality.

EXPERIENCE

Product Engineer — Àrà (ara.ayodeji.xyz)

2026 – Present · Abuja, Nigeria

- Built an AI-native product studio end-to-end — brand, design system, copy and code — offering fixed-scope, fixed-price engagements: AI opportunity audits, six-week MVPs, AI integration sprints, and an ongoing design-and-build subscription.
- Shipped two live AI tools embedded in the studio site — “Audit my business” and “Spec my idea” — powered by server-side Gemini with structured JSON output (React 18, TypeScript, Vercel serverless functions, Supabase).
- Designed a culturally rooted design system drawing on Nigerian textile traditions (Adire, Aso-oke, Uli linework), with full reduced-motion accessibility support.

Product Strategist & IT Consultant — SafeTrip (safetripbuses.com)

Nov 2025 – Feb 2026 · Lagos, Nigeria (remote)

- Led product development of an interstate and metro bus booking platform: real-time seat availability computed from live booking data, dynamic pricing, and recurring schedule support.
- Built the operations admin panel — full CRUD for fleet, routes, schedules and bookings — now used to run daily interstate services and LAMATA metro franchise routes in Lagos.
- Stack: React, TypeScript, Vite, Tailwind CSS, Supabase (PostgreSQL).

Research & Development Lead — Jentech AI (jentech.ai)

Sep 2025 – Jan 2026 · Remote

- Lead research initiatives that inform product direction, owning the research lifecycle from hypothesis generation through data synthesis and stakeholder presentation.

Independent Product Work — Self-directed builds, shipped to production

Jan 2025 – Aug 2025 · Remote

- **SubtleFlow** (subtleflow.xyz) — designed and built a free business-document workspace covering ten document types (invoices, contracts, proposals). “Draft with AI” turns a one-line brief into a complete editable draft via Supabase Edge Functions; tokenized share links enable no-account e-signing; every document exports as a branded, in-browser PDF. React 19 + Supabase (Postgres with row-level security).
- **HealthTrackNG** — launched a digital health platform connecting underserved Nigerian communities to clinics and telehealth, prioritizing offline functionality and multilingual support (English, Hausa, Yoruba). Onboarded 10,000+ users in six months; real-time clinic booking roughly halved appointment wait times.
- **TechiesMatch** (techies.love) — managed development of an ML-matched dating platform for tech professionals. A/B-tested onboarding reduced drop-off by 28%; early-cohort retention improved from 45% to 75%.

AI Product Manager — Finalist — HNG Tech (competitive accelerator)

Feb 2025 – Apr 2025 · Remote

- Ran end-to-end agile delivery for AI features on a tech-talent platform within HNG’s large-scale competitive internship, reaching the Finalist stage (top tier of thousands of participants).
- Led integration of an AI recommendation engine and coordinated engineering, design and marketing on requirement prioritization driven by user feedback.

Business Manager, Operations & Business Development — Brightyield Golden Resources Ltd

Mar 2023 – Apr 2025 · Abuja, Nigeria

- Digitized a previously manual consumer-loan workflow (IPPIS payroll-deduction loans for police officers and civil servants): automated eligibility checks, KPI dashboards and mobile-friendly interfaces improved operational efficiency by ~20% and cut project delays by 15%.
- Served as the liaison between business and technical teams — requirements gathering, stakeholder communication, and translating business objectives into technical deliverables.

EARLIER CAREER

Project Assistant, HSE — Shell Petroleum Development Company (SPDC)

Jan 2020 – Nov 2020 · Bayelsa, Nigeria

- Supported risk assessments and permit-to-work processes across oilfield operations, contributing to a zero-incident record; produced HSE metric reports informing risk mitigation.

Process Supervisor — Kam Industries

Feb 2016 – Aug 2016 · Ilorin, Nigeria

- Supervised automated manufacturing lines and trained a 10-person technician team; process optimizations reduced downtime by 18%.
